Claim 1; Page 115-117; 134pp; English. Novel polynucleotides encoding maize cyclin D isoforms 1, 2 and 3, related proteins and antisense RNA useful for control of cell cycle ${\sf related}$

WPI; 2000-283589/24 P-PSDB; AAY79321.

CC gene that encodes cyclin D (CycD, see AAY79321), a protein necessary CC gene that encodes cyclin D (CycD, see AAY79321), a protein necessary CC cpt gene that encodes cyclin D (CycD, see AAY79321), a protein binds to CC cDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma CC cDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma CC associated protein, releasing the E2F transcription factor which CC cativates DNA synthesis. The invention provides maize CycD cycle regulation. Also provided are that are involved in cell cycle regulation. Also provided are cycle recombinant expression cassettes (including ZmCycD in sense or cycle are involved in cell cycle regulation. Also provided are recombinant expression, host cells, transgenic plants (especially CC corn, sorghum, sunflower, safflower, wheat, rice, alfalfa or coilseed Brassica) and antibody compositions. A claimed method of CC modulating the level of CycD protein in a cell comprises CC dividing the cell with a recombinant expression cassette comprising a CycD polynucleotide linked to a promoter, and cycD protein in the cell. The CycD protein is present in an amount CycD protein in the cell. The CycD protein is present in an amount CycD protein to alter cell division, increase the number of cells sufficient to alter cell growth, protein salter plant cycle protein, stalk, pollen, stamen) growth, produce organ ablation, cother cells are arreated in Cl or Go Dhase or in a particular cell chart cell are arreated in Cl or Go Dhase or in a particular cell that cells are arrested in GI or GO phase or in a particular cell cycle, improve response to environmental stress including dehydration, heat or cold, increase the number of pods per plant, increase the number of seeds per pod or ear, alter the lag time in seed development, provide hormone-independent cell growth, or development, provide hormone-independent cell

The level of CycD protein in the cells is transiently modulated by introducing CycD RNA or CycD polypeptides. CycD polynucleotides can be used to identify CycD interacting proteins. All claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for progression from G1 into S phase. The encoded protein binds to CDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma associated protein, releasing the E2F transcription factor which activates DNA synthesis. The invention provides maize CycD polynucleotides (see AAZ94581-84) and polypeptides (see AAY79321-24) that are involved in cell cycle regulation. Also provided are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprising a CycD polynucleotide linked to a promoter, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                corn, sorghum, sunflower, safflower, wheat, rice, alfalfa or oilseed Brassica) and antibody compositions. A claimed method of modulating the level of CycD protein in a cell comprises transforming the cell with a recombinant expression cassette
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  recombinant expression cassettes (including ZmCycD in sense or antisense orientation), host cells, transgenic plants (especia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 dehydration, heat or cold, increase the number of pods per plant, increase the number of seeds per pod or ear, alter the lag time in seed development, provide hormone-independent cell growth, or increase the growth rate of cells in bioreactors. The level of CycD protein in the cells is transiently modulated by introducing CycD RNA or CycD polypeptides. CycD polynucleotides can be used to identify CycD interacting proteins. All claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1077 BP; 228 A; 265 C;

The encoded protein binds to CDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma associated protein, releasing the E2F transcription factor which activates DNA synthesis. The invention provides maize CycD polynucleotides (see AAZ94581-84) and polypeptides (see AAX79321-24) that are involved in cell cycle regulation. Also provided are
                                                                                                                                                                                                                                                                                                         Sequence 1173 BP;
                                                                                                                                                                                                                                                                                                                                                                                      increase the growth rate of cells in bioreactors. The level of CycD protein in the cells is transiently modulated by introducing CycD RNA or CycD polypeptides. CycD polypucleotides can be used to identify CycD interacting proteins. All claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     increase the number of seems put pour cell growth, or seed development, provide hormone-independent cell growth, or the mrouth rate of cells in bioreactors. seq_documentation_block:
This nucleotide sequence represents a portion of the cDNA insert conclone ceb5.pk0049.h5 encoding a portion (see AAY31897) of a corn cyclin delta-2 polypeptide. The clone was isolated from a corn cembryo (20 days after pollination) cDNA library. The invention cembryo (20 days after pollination) cDNA library. The invention cyclin delta-3 cyclin delta-2 and cyclin delta-3 cyclin delta-3 cyclin delta-2 and cyclin delta-3 cyclin delta-3 cyclin delta-3 cyclin delta-3 cyclin delta-3 cyclin delta-3 cyclin of a cyclin, in sense cyclineric genes encoding all or a portion of a cyclin, in sense cyclineric genes creatists in altered levels of the cyclin protein in a transformed cyclin set cell. This would have the effect of altering the regulation cyclin cyclin in those cells. The nucleic acid fragments may be cyclin a portion of cyclins in plant cells to enhance cell tissue cyclin plants, provide genetic tools to enhance cell cycle all or a portion of cyclins should facilitate studies of cell cycle in plants, provide genetic tools to enhance cell growth in tissue culture, increase the efficiency of gene transfer and help provide more stable transformations. The proteins can be used as targets cyclintate design and/or identification of inhibitors of those
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Zea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cyclin delta-2; corn; maize;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       seq_name: /SIDS2/gcgdata/geneseq/geneseqn/NA1998.DAT:AAV33887
                                                                          Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                _documentation_block:
                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the CYCD1;1 cDNA from Helianthus tuberosus which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 14; p56-57; 75pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Regulating growth and structure of plants by modulating protein that controls cell division - specifically a D-type cyclin, and related chimeric genes and transformed cells and plants, used to alter growth rate, flowering, seed production etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 1998-532012/45.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seq_name: /SIDS2/gcgdata/geneseq/geneseqn/NA1999.DAT:AAZ19958
                                                                                                               CC DNA inserts in clones sahlc.pk003.17 and sr1.pk0001.95 encoding CC the entire soybean cyclin delta-1 protein (see AAV31894). These CC clones were respectively isolated from soybean sprayed with CAUCHOMER (MM) herbicide and soybean root cDNA libraries. The CC authority (TM) herbicide and soybean root cDNA libraries. The CC invention relates to isolated nucleic acid fragments (see AAX19953-66) CC encoding cyclin A, cyclin delta-1, cyclin delta-2 and cyclin delta-3 CC polypeptides (see AAX31889-902). It also relates to the construction CC of chimeric genes encoding all or a portion of a cyclin, in sense CC or antisense orientation, where expression of the chimeric gene CC results in altered levels of the cyclin protein in a transformed CC host cell. This would have the effect of altering the regulation CC collure growth. The availability of nucleic acid fragments may be CC culture growth. The availability of nucleic acid sequences encoding CC collure, increase the efficiency of gene transfer and help provide CC culture, increase the efficiency of gene transfer and help provide more stable transformations. The proteins can be used as targets CC enzymes that may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            _documentation_block:

                                                                                                                                                                               CC clone se6,pk0028.fll encoding a portion of the cDNA insert in CC clone se6,pk0028.fll encoding a portion (see AAV31895) of a soybean CC cyclin delta-1 protein. The clone was isolated from a soybean CC embryo (26 days after flowering) cDNA library. The invention CC embryo (26 days after flowering) cDNA library. The invention CC encoding cyclin A, cyclin delta-1, cyclin delta-2 and cyclin delta-3 CC polypeptides (see AAV31889-902). It also relates to the construction CC of chimeric genes encoding all or a portion of a cyclin, in sense CC ensults in altered levels of the cyclin protein in a transformed CC ensults in altered levels of the cyclin protein in a transformed CC ell division in those cells. The nucleic acid fragments may be CC used to express cyclins in plant cells to enhance cell tissue CC culture growth. The availability of nucleic acid sequences encoding CC ellurare growth. The availability of nucleic acid sequences encoding CC culture, increase the efficiency of gene transfer and help provide more stable transformations. The proteins can be used as targets CC enzymes that may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq_name: /SIDS2/gcgdata/geneseq/geneseqn/NA1999.DAT:AAZ19959

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          756 ACTTGTGATTGACAATAACCAGAGGAAACCCCCTAAGGTGTTACCACAGC 805
                                                                                                                                                                                                                                                                                This sequence represents the CYCD3;1 cDNA from Nicotiana tabacum which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, malze, oilseed rape, wheat, tomato, rice, barley, sunflower, carrattenom.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Regulating growth and structure of plants by modulating protein that controls cell division - specifically a D-type cyclin, and related chimeric genes and transformed cells and plants, used to alter growth rate, flowering, seed production etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-OCT-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO9842851-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nicotiana tabacum.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1071 AGTGTGTTCTAAGCCCATTTCACACAAACGCAAATATGAGAATCCTAGTC 1120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1121 ATAGCCCAAGTGGTGATTGATCCA.....ATTTACAGTTCAGAA 1161
                                                                                                                                                                                                                                    This sequence represents the CYCD3;2 cDNA from Nicotiana tabacum which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note="Vector: pSPORT1; Site_1: Sal1; Site_2: Not1; This cDNA library was constructed from mRNA isolated from immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies pSuperScript cDNA was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a synthesized from mRNA using a poly(dT) sequence with a to the blunt-ended cDNA fragments followed by Not1 the blunt-ended cDNA fragments followed by Not1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORTI vector. The ligated cDNA fragments were transformed into E. coll ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note that Gm-r1030 is a re-rack of Gm-c1007."

```
the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes, Roots were harvested. The tissue, total RNA, and poly(A) RNA were prepared, a cDNA library was made in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside. The cDNA clones were in vivo excised to give pBluescript phagemids before normalization was carried out. The mass excision of phagemid library and normalization were done in HT Nguyen lab by D. Zhang at Texas Tech University. Normalization protocol used was that of Soares. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              XhoI; cDNA was prepared from polyA+ enriched RNA from roots harvested at I0, 17, 22, 31 and 38 days post-inoculation with Glomus versiforme. The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propagated in XLOLR cells."
